Practical Question

Solve any four Question:

a) **Computation of one- sample t-test using hypothetical data**
b) **Computation of independent- samples t-test using hypothetical data**
c) **Computation of paired-samples t-test using hypothetical data**
d) **Computation of t-test to the test significance of a sample mean.**
e) **Computation of the means of two independent group using the t-test,**
f) **Computation of Chi-square goodness-of-fit test.**
g) **Computation of chi-square test for testing fairness of a die.**
h) **Computation of chi-square test using a contingency table.**
i) **Computation of karl pearsons coefficient of correction using the direct method.**
j) **Computation of correlation between two varibles and indepentation of result.**
k) **Computation of positive and negative Correlation using hypretation of result.**
l) **Computation of correlation between age and income .**
m) **Computation of spearmans rank correlation coefficient.**
